

Diaper-Depot® Maintenance Recommendations

Inspecting your Diaper-Depot is necessary to keep it in proper working order. Please review the following Safety Inspection Checklist.

The Diaper-Depot should be inspected frequently on a daily basis to identify problems. Have staff familiarize themselves with the Diaper Depot and what to inspect daily.

Safety Inspection Checklist:

- Warning labels are present and fully legible
- Harness is present and working correctly. The buckle or closure can be opened and closed properly and the belt can be adjusted.
- There are no missing or broken components on the unit and all fasteners are tight and secure.
- Unit folds down easily without impediment and closes back fully to its correct position.
- There are no cracks or protruding areas on the units that may cause injury.

Care and Maintenance Information

- Clean unit as often as needed using a mild soap or detergent.
- Make sure all cleaning agents have been completely removed from the unit prior to putting it back into service.
- Parts such as the safety harnesses can be replaced easily. Other repairs may require a higher level of mechanical expertise.
- Recommended replacement liners for Safe Strap Diaper-Depots can be purchased
